

Atlas Modular Refining

www.AtlasRefining.com

Turnkey modular crude oil refineries. European engineering.
ECA financing arranged by us.

WHO WE ARE

Who we are

Atlas Modular Refining is a project development company, not a consultancy. We integrate European engineering, modular construction and Export Credit Agency financing under a single execution platform, taking projects from conception through commercial operation.

WHAT WE DELIVER

What we deliver

We design and deliver full-conversion modular crude oil refineries. Every configuration is engineered for zero fuel oil, upgrading every barrel to high-value products such as Euro V diesel, gasoline and jet fuel. This ensures structural profitability across market cycles.

KEY DIFFERENTIATORS

Key differentiators

European engineering standards. Modular, off-site fabrication. ECA financing arranged by us. One platform and one point of accountability from concept to operation.

DELIVERY MODEL

Delivery model

Typical schedule: 18–24 months to first revenue, with full operations reached in approximately 36 months. Pre-commissioning in the fabrication yard reduces field risk and shortens the on-site critical path.

FINANCING

Financing

Export Credit Agency-backed financing structures, arranged alongside the engineering scope. Coverage of up to 85% can be available for eligible equipment and construction costs, subject to ECA and sponsor due diligence.

TRACK RECORD

Track record

We are in advanced discussions with sovereign and private parties across West Africa, the Middle East, and other regions for modular refinery projects. Our model is designed for execution and we are actively progressing these opportunities toward final agreements.
